EXPERIENCE

ExxonMobil (contract)

Houston, TX

05/19 - Present

- Supporting and maintaining several vendor and custom applications related to the upstream oil and gas industry. Applications include ATR's PRISM Suite and eVision's Permit Vision.
- Developing automation applications, jobs and solutions using C#
- Developing and consuming APIs, written in C#, transporting data to and from mission critical databases and other data repositories/sources
- Developing a comprehensive monitor application to track and monitor uptime from over two dozen servers. Includes real-time dashboard to view stats related to server health and uptime.

Halliburton Energy Services

Houston, TX

11/17 – 05/19

- Actively maintained and developed over a dozen C# applications ranging from ASP.NET MVC, Web Forms and WinForms
- Responsible for bug fixes, upgrades and deployments for all C# applications within the development team
- Managed and lead offshore team with TFS tasks and sprint planning for an agile-like approach to development
- Lead level of effort for new C# applications, enhancements and defects
- Met with business and functional stakeholders to ensure deliverables are in scope, on time and on budget

DXC Technology (spin/merge)

Houston, TX

04/17 – 11/17

- Developed and maintained a customer facing web application written in Java with JSP and Struts framework. Allows customers to view and manage hardware, contracts and service agreements.
- Assisted in splitting the web application into two parts for the legal separation of Hewlett Packard Enterprise and its software division
- Created and tested new email design and template for new company
- Led onshore development efforts being accountable to business stakeholders throughout dozens of countries and time zones

Hewlett Packard Enterprise

Houston, TX

06/15 – 03/17

- Developed and maintained a customer facing web application written in Java with JSP and Struts framework. Allows customers to view and manage hardware, contracts and service agreements.

- Improved memory and database connection performance by over 75% through refactoring, allowing a better and more seamless experience
- Led redesign of application's registration page
- Led redesign of email notification sent out to customers
- Assisted in cloning the application for the legal separation of Hewlett-Packard, including infrastructure and database
- Participated in multi-team and multi-function capacity requirements planning meetings to reach level of effort for extensive rewrite and enhancements for current application

Patterson Companies

Effingham, IL

05/14 – 08/14

- Created an ASP.NET MVC app for healthcare professionals to manage patients and patient's information
- Began groundwork on migrating WinForms application to web-based application
- Created graphs to display data and other information for company's internal site
- Created and maintained nearly 100 units in CRUD form in C#
